#### Nagylengyel-Magykapornak

- 1. The crude-oil storage tanks, from which tankcars are filled at Nagykapornak, are to be moved about next July or August to Szentgal. Before that date, the pipeline is to be extended from Nagykapornak to Szentgal. The oil will then be carried to Pet by tankcars for refining. This arrangement will speed up the turning round of the tankcars.
- Some of the pipes in the line to Nagykapornak have proved to be of poor quality, and leaks have developed at several points, as the result of the high pressure.
- 3. Nagylengyel oil contains 4% gasoline, 36% gas oil; the remainder being Pakura oil and asphalt. The Nagylengyel yield is to be increased to 1.2/1.3 million tons per annum. The average depth of bore is 1,500 meters.

## Lispe

- 4. Yield in 1943 was 800,000 tons, in 1954 300,000 tons, i.e. less than 1,000 tons per day. Average depth of bore is 1,100 meters. Oil is obtained by 200 piston pumps (Kolbenpumpen), from 120 bores (Bohrlöcher), at a natural gas pressure of 30 atm. (formerly 110 atm.). Spare parts for the pumps are produced by Hungarian factories, but do not last more than a few weeks.
- 5. Lispe gasoline is 50 octane.

# Oil Imports

25X1

6. These have dropped during the last few weeks to practically zero. Reserves are therefore considerably reduced.
